

GSTS

GLOBAL SPATIAL TECHNOLOGY SOLUTIONS INC.

GSTS provides vessel planning and analysis solutions for the safe, efficient and environmentally sound transport of people and goods on a global scale through the use of satellite and shore based data systems.

GSTS saves time and lives, improves efficiency and ensures that carbon emissions and fuel consumption are kept to a minimum.

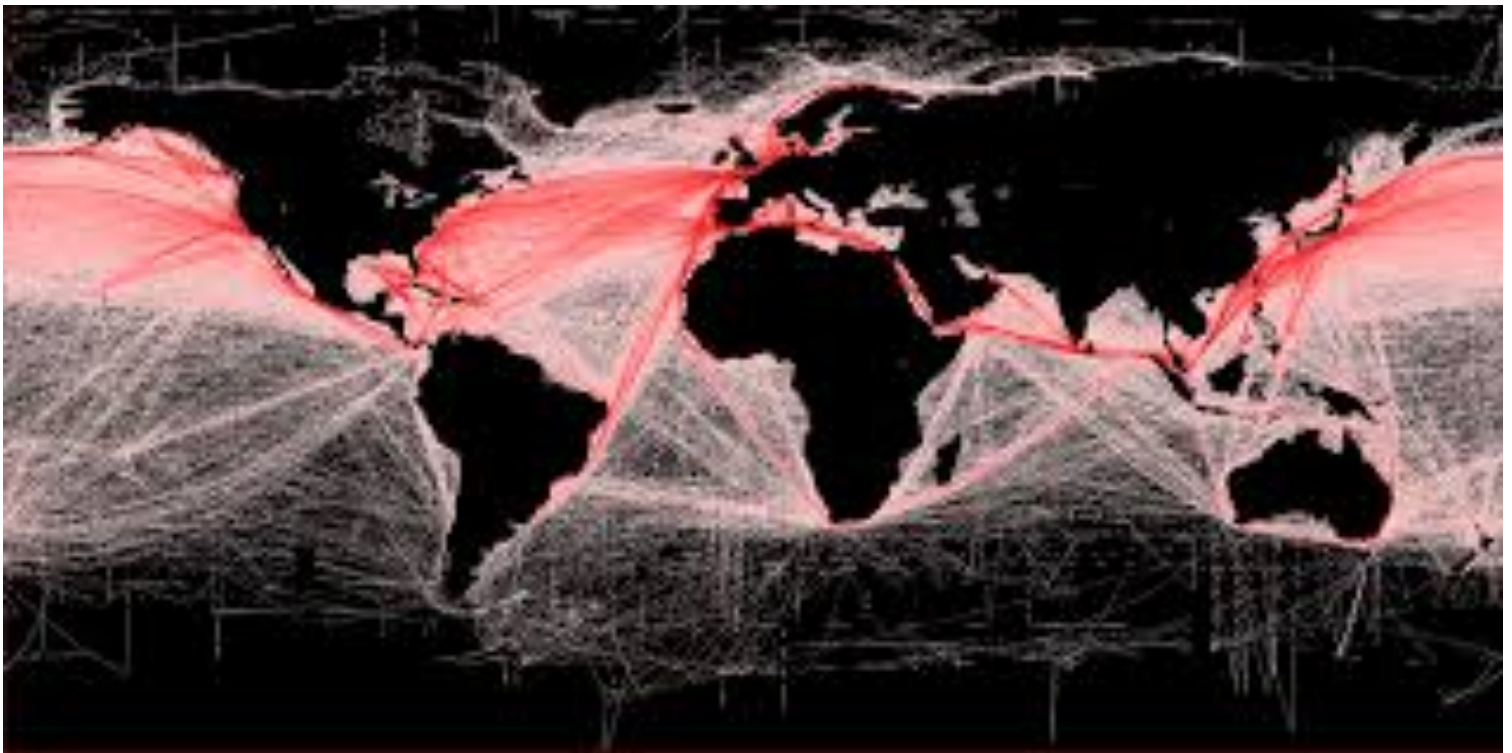

GSTS provides Maritime Management and Planning Solutions using Satellite AIS Data

Working with strategic partners in the space industry, GSTS has developed turnkey solutions for the maritime industry, providing clients with:

- Forensic analysis and track ship movements for legal and insurance purposes.
- Predictive planning and analysis tools to increase commercial efficiency.
- Logistic planning and simulation tools.
- Custom port-to-port vessel management applications.
- Fused optical and RADAR satellite data that provide a complete picture of shipping routes.
- Comprehensive greenhouse gas (GHG) emissions monitoring and management.
- Regional and vessel analysis of GHG emissions.
- Satellite vessel monitoring for security, fisheries management and surveillance purposes
- Historical data analysis to assess trends and patterns for marine planning.
- Compliance tools that support regional regulatory and environmental standards.
- Dynamic ship routing to optimize for schedule and fuel cost.

GSTS conducts data quality and validation checks to ensure that only valid data is employed in the global solution set – removing intentional and well as unintentional data errors.
